

The Next Level of Sustainability

You Wouldn't Dump Waste in the Ocean, So Why do You Send it to a Landfill?

Ontario Needs An Alternative To Landfill Disposal

A safe, sustainable waste management system is essential to our modern society. Even with effective recycling programs population growth is stressing our waste infrastructure. The Ontario Waste Management Association estimates that our landfills will be filled by 2035.

We must act. Developing a new landfill is a lengthy, expensive and uncertain process. While Ontario has a few active landfill projects, these only replace some of our diminishing capacity. Without a made-in-Ontario solution, we will become more and more reliant on landfill disposal in the United States – this is unsustainable.

U-PAK GROUP OF COMPANIES

A Pioneer in the Waste and Recycling Industry

U-Pak is an independent, privately held, Canadian-owned and operated business with an independent board of directors. Our owners are an experienced team of industry leaders with a customer-driven vision and focus.

Enjoying our 50+ year in business, we take great pride in maintaining a high level of service to our customers. Conveniently located in the Greater Toronto Area, we service local and nationally located clients. U-Pak has provided a wide range of support capabilities, exceeding customer expectations for service quality. Our history includes developing and managing services in partnership with some of Canada's largest corporations.

U-Pak transports all of the collected waste to the final destination site. We only offer Canadian disposal options including Energy from Waste, thus eliminating cross-border dumping issues that challenge our competitors. Our ability to handle all material in Canada from "cradle to grave" gives our clients assurance in today's environmentally aware society.

Zero Waste Solutions

Reduce Your Carbon Footprint Today

We understand today's corporations' fiscal direction and desire to achieve cost control goals and higher diversion rates. Our **Zero Waste Solutions** will enable you to achieve your goals and help reduce your carbon footprint. We are confident we are well positioned to assist you in reaching your goal with all our superior waste & recycling management programs. We stand behind the services we perform and wish to grow our relationship with you by offering Zero Waste services and helping you to achieve improved diversion rates.

- **Energy from Waste** - our exclusive option to improve your diversion from landfill. Material formerly directed to a landfill can now be converted to energy in the Province of Ontario. Our exclusive EfW program will help you achieve Zero Waste status for your site. This assures that you will be an industry leader demonstrating your commitment to sustainability.
- **Bakery Recycling** - we process over 100,000 tonnes of Bakery Waste annually through our exclusive Bakery Waste division in southwestern Ontario. We collect a wide variety of wheat, corn and grain products, which are then processed to meet Agriculture Canada's standards and sold as Dehydrated Meal for cattle and chickens.
- **Organics Recycling** - our organics recycling program allows food waste typically sent to landfills to be converted into renewable feed. These materials are processed and mechanically separated from non-edible material before being direct feed to livestock or anaerobic digestion facilities.

Why choose Zero Waste? The simple answer: we aim to send nothing to landfill. We reduce what we need, reuse what we can, send little to be recycled and compost what we cannot.

U-Pak's **Zero Waste Solutions** looks to redefine the system. As a society, we live in a linear cycle where we take resources from the earth and dump them into a giant hole in the ground. Zero Waste aims to move to a circular process where we write trash out of existence. Reduce, reuse, recycle, and repurpose...just as nature intended. Instead of discarding resources, U-Pak looks to create a system where all resources can be resumed fully back into the system.

OUR SERVICES

50 Years of Experience

We Offer a Vast Array of Services

Customers often think that waste removal is as simple as removing your garbage, but there are many value-added services that we offer to our customers. Our services include:

- Energy From Waste
- MOE Waste Audits
- National Account Management
- Remote Monitoring
- Food, Organics And Bakery Recycling
- Wood, Paper, Cardboard And Plastics Recycling
- Material Recovery
- Single Stream Recycling
- Product Destruction
- E-Waste Recycling
- Custom Installs
- Equipment Service / Maintenance
- Waste Transfer & Recycling Processing Facility
- Front End And Roll-Off Container System
- Recycling Equipment
- Trailer Services

Live-answer customer service department - capable of answering your needs during off hours and holidays (when your team may need assistance the most). U-Pak will not only promise a 24-hour, 7 days-a-week availability of service with a 4-hour guaranteed response time, but we will also back this by making it part of the contract to you. This is part of U-Pak's Value First offering to our clients.

Our Values drive our Services. Our People drive our Values.

We openly share our Core Values, as this is what drives our business. It is in our DNA. It is what we hold ourselves accountable to and provides complete transparency to anyone we interact with. This is our commitment to you.

INNOVATE: COURAGE TO DO IT BETTER...

Innovation takes courage. We aspire to create solutions to make our businesses better. Celebrate and give credit when we innovate.

RESPECT: TREAT OTHERS AS YOU EXPECT TO BE TREATED...

We are humble and respectful. We're not perfect, but we grow together. Ask questions before making conclusions.

LOYALTY: DEVELOP AND GROW RELATIONSHIPS WITH TRUST...

We grow relationships that are mutually beneficial through trust, commitment, and investing in each other.

COMMITMENT: YOUR WORD MATTERS...

We do what we say we will do. "Don't make our problems other people's problems" is our guiding principle.

SUSTAINABILITY: MAKE THE FUTURE BETTER...

We believe in a Zero Waste future, in which all resources are reused. We support our communities to make them better.

PRODUCT DESTRUCTION

When Confidentiality Matters Most

Product Destruction is often the only way to eliminate your liability associated with the distribution of your recalled, out-of-spec and improper use of outdated packaging. Craigslist, Facebook Marketplace, eBay, and flea markets have assisted crooks with the ability to sell these types of products in volume. With our Product Destruction services, you can rest assured that your unwanted products will not end up in the wrong hands.

WASTE CONSULTING

Waste Audits & Waste Reduction Workplans Tailored To You

Benefit from our years of experience and industry expertise. We have been serving commercial and industrial clients since 1972.

- Stay up to date with the current Federal and Provincial legislation.
- Performing MOE Waste Audits and Waste Reduction Work Plans.
- Improve Cost Recovery and Recycling Alternatives.
- Waste disposal cost forecasts for months or even years in advance.
- Increase profit by pinpointing exactly where improvements can be made to your existing services and enact change.

CUSTOM EQUIPMENT

Tailored to Fit your Business

For many companies, today's waste management and recycling strategy includes on-site technology courtesy of our Special Equipment installations division. Working together with our design team, we will help you determine what special install best suits your needs. We offer a full suite of modern equipment options, including compactors, balers, augers and remote monitoring.

Each machine is built exclusively at our in-house manufacturing facility. Upon completion, the equipment is then delivered and installed by our U-Pak team of professionals. You will receive constant support featuring the latest technology for reporting waste and recycling data. This allows for ease of operation, which translates to greater expense control and overall operational savings. Our technicians will also regularly monitor and maintain your new equipment, providing the support needed to ensure a compliant and sustainable operation.

From large, complex machinery to smaller business units, our exclusive Special Equipment Installation division is ready to provide you with modern day solutions for all your in-house waste management and recycling needs.

Food, Organics & Bakery Recycling

U-Pak offers three (3) Solutions to meet our clients needs to dispose of organic waste materials:

Bakery Waste

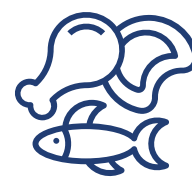

Collected from large generators of bakery products which dispose of a waste stream rich in Wheat, Corn and Grains. A mixture of bread, cookies, cake, crackers, flour and dough. Small amounts of sugar and other baking increments are permitted in this waste stream.

These materials are processed to meet the standards of Agriculture Canada to be sold as Bakery Waste Dehydrated Meal after being mechanically separated from non-edible material dried and ground.

Produce Organic Material

Void of all meat and meat and can be audited to verify that contains only fruits, vegetables and grains. Primarily collected from grocery markets and processing facilities of perishable goods. These materials are processed, mechanically separated from non-edible material before transfer to Anaerobic digestion or direct feed.

Organic Material

Post and Pre Consumer, including residential waste and commercial organic waste streams. The largest and most common organic waste stream which is collected from result, entertainment facilities and business which has a full range of organic content, including meats and meat by-products. There are two main ways of dealing with the organic portion of this waste:

- 1) Feedstock for anaerobic digestions (i.e. biogas plants)
- 2) Aerobic composting - Currently the most common method used for organic waste recycling.

In 2015, Ontarians generated about 3.7 million tonnes of food and organic waste, which includes food that could have been eaten or repurposed. About 60% of this waste was sent to landfill.

ONE-STOP SOLUTION

For All Your Waste and Recycling Needs

Front End Container Systems

Designed for commercial, industrial and institutional applications.

2 Yard Bin

80" x 40" x 36"

Perfect for small restaurants
